STATE OF MARYLAND DEPARTMENT OF AGRICULTURE

MARYLAND AGRICULTURAL LAND PRESERVATION FOUNDATION

November 1, 1987

The Honorable William Donald Schaefer, Governor
The Honorable Thomas V. Miller, Jr., President of the Senate
The Honorable R. Clayton Mitchell, Jr., Speaker of the House

Gentlemen:

We are pleased to submit the Fiscal Year 1987 Annual Report of the Maryland Agricultural Land Preservation Foundation. We are proud to announce that the year that marks our tenth anniversary was the most productive year in our history. The Foundation established more agricultural preservation districts and purchased more development rights easements than any previous year.

Our grand total of over 60,000 acres under perpetual easement makes this the most successful program of its kind in the United States. The Foundation was honored for this accomplishment during the past year by receiving a national award for excellence in agricultural conservation by the American Farmland Trust.

Although our progress has been substantial over the last ten years, unfortunately Maryland has lost far more agricultural acres than it has saved. Our mission is to preserve enough of Maryland's finest farmland to perpetually maintain a viable agricultural industry. Your continued strong support allows us to challenge the future where land use issues grow ever more critical.

Sincerely,

lliam I. Guy, Chairman

Board of Trustees

Wayne A. Cawley, Jr. Secretary of Agriculture

Gerald F. Talbert

Executive Director

MARYLAND AGRICULTURAL LAND PRESERVATION FOUNDATION

FISCAL YEAR 1987 ANNUAL REPORT

REVIEW OF PROGRESS

GROWTH IN THE PROGRAM

One measure of the health of the Agricultural Land Preservation Program is the continuing establishment of new agricultural preservation districts. Properties in district status provide a pool of potential easement applicants. During FY'87, a 17% increase in the acreage base was achieved as 153 new agricultural preservation districts were established providing protection to 21,511 acres. This became the most productive year in Foundation history for the establishment of new districts. By the end of the fiscal year, 978 districts were enrolled, protecting 142,530 acres.

It was also the most productive year in the ten year history of the program in easement acquisition. After settlement, 80 new easement properties will add 11,735 acres to the growing force of permanently preserved agricultural land, a 24% increase over last year's total. The program now totals 393 easement properties providing perpetual protection to 60,070 acres. This retires 42% of the current pool of total district acreage.

The FY'87 Easement Acquisition Program cost \$8.8 million, of which \$7.1 million or 81% are State funds and \$1.7 million or 19% are County funds. The average acquisition cost for FY'87 was \$756 per acre. Although the FY'86 average was lower at \$752 per acre, the last two years have totalled the greatest annual yields at the lowest average cost in program history. As a result, the current historic average acquisition cost has dropped to \$804 per acre compared with the historic acreage cost posted at the end of FY'85 at \$832 per acre. Current land use figures for the total acreage base in the program are 63% cropland, 13% pasture, 20% woodland and 4% other uses.

Soil conservation plans are in effect on 67% of existing districts, an increase of 3% over FY'86 and 9% over FY'85 totals. Since FY'85, a criterion has been in effect that requires a soil conservation plan to be developed in order to be eligible to submit an easement application. To date, 104 districts which did not have soil conservation plans prior to district establishment had plans developed as a result of this requirement.

Further, since FY'85, landowners who sell development rights easements are required to implement soil conservation plans according to the plan's schedule of implementation. Although FY'87 data are not yet available, FY'85 and FY'86 total 123 easement properties and 19,410 acres which are subject to soil conservation plan implementation. The plans for these properties contain a total of 335 major practices necessary to correct an existing erosion or water quality problem. To date, 195 practices or 58% have been implemented. Of those, only 53 practices or 16% were implemented after easement settlement as a result of the FY'85 requirement. The vast majority of the implemented practices were in place prior to easement settlement, indicating the landowners' interest in erosion control and water quality without influence by the FY'85 requirement. Of the 123 properties currently on record, 30 properties have fully implemented plans protecting 4,630 acres.

PROGRAM ISSUES IN FY'87

REDUCTION IN SETTLEMENT TIME

Over the last several annual reports, issues dealing with time problems have been examined. One perennial problem is the amount of time from an easement applicant's acceptance of the Foundation's offer to purchase the easement to the actual settlement. The Department of General Services, whose legal staff performs the settlement process, has increased staff levels and has worked with the Department of Agriculture over the last several years to initiate several time saving procedures.

Of all the components of the settlement process, conducting title searches has been the most time consuming. The Department of General Services (DGS) made several procedure revisions, including the creation of multi-year contracts with private sector title companies to perform title searches on a regional basis. Although these revisions saved significant time by DGS staff, it was noted in the FY'86 Annual Report that title searches were still the most time consuming component. It was apparent that all private sector businesses dealing with real estate function according to the economic cycle; consequently, when factors appeared as they did through calendar year 1986, such as lower interest rates, when factors appeared as they did through calendar year 1986, such as lower interest rates, the dramatic change in capital gains tax law and the resulting barrage of real estate transactions, the settlement process in all sectors took much longer than usual.

In January, 1987, Earl F. Seboda, Secretary of General Services and Wayne A. Cawley, Jr., Secretary of Agriculture, met to discuss other measures which would provide significant time saving measures. Up until that point, title searches were not ordered by DGS until the landowner's option contract had been approved by the Board of Public Works. The Secretaries agreed to order title searches for FY'87 easement applicants as soon as the applicants indicated their acceptance of the offer. This simple measure alone saved 4-6 applicants indicated their acceptance of the offer. This simple measure alone saved 4-6 applicants indicated their acceptance of the offer. LEGISLATION

The 1987 General Assembly approved legislation proposed by the Foundation which clarified an issue regarding development rights retained by original easement sellers. The law had already established a density of one lot per 20 acres with a maximum of 10 lots per property for children of easement sellers. Although the law also granted a lot for each owner, there was no density or cap regarding owners' lots. It was speculated that the legislature's assumption was that there would only be one owner's lot per property. Most property in the program is co-owned by husband and wife, each of which would fit the definition of owner and each could receive a lot. It is not infrequent that even more definition of owner and each could receive a lot. It is not infrequent that even more co-owners are involved in some properties. The passage of House Bill 164 made owners' lots adhere to the same cap and density as children's lots such that either or both were allowed one lot per 20 acres with a maximum of 10 lots per property.

The passage of Senate Bill 238 had a more dramatic impact on the future of Maryland's Agricultural Land Preservation Program. This bill, which revised the funding allocation of Program Open Space, made the program a direct line budget item for the first time. As Program Open Space is administered by the Department of Natural Resources, the Department of Agriculture would negotiate with the Department of Natural Resources each year for a portion of the State share of Program Open Space funds. Beginning in FY'89, the new law will directly allocate \$5 million a year to the Agricultural Land Preservation Fund. Program Open Space funding for agricultural preservation in the past has ranged between \$2 to \$3.5 million a year and has totalled \$23 million through FY'87, 58% of total State funding.

TABLES

ACREAGE REDUCTION - Page 10

The table showing acreage reductions in districts or easement properties lists the five factors that would result in an adjustment of the program's acreage base. The routine exclusion of one acre building lots for original owners and their children totalled 8 district acres and 5.9 easement acres. Acres excluded for building lots to date total 18 acres in districts and 18.9 acres in easements for a combined total of 36.9 acres.

Since 1982, when new lots are created on land on which an easement was purchased, the landowner must pay back the per acre value of the easement offer. A payback is not required on easements purchased prior to 1982 or for lots surrounding dwellings which existed at the time of settlement. The payback amount for FY'87 was \$3,591.06 which brings the total to date to \$7,918.20. Land in districts or easements which is directly impacted by improvements of roads, bridges or culverts is excluded when requested by county governments. Only 3.1 acres were excluded in FY'87 with a payback by a county of \$89.50 for excluding 0.077 acres of easement property. To date, 9.1 acres have been excluded for such public improvements with a total payback of \$89.50.

The most significant acreage reduction factor in FY'87 was the termination of districts. Two districts totalling 276.5 acres were terminated before the normally required 5 year period due to severe economic hardship. Fourteen districts totalling 2,810.20 acres terminated after the minimum 5 year period. To date, 26 districts covering 4,585.69 acres have been terminated, 3% of the current total acreage base in district status.

In the easement settlement process, acreage adjustments are often made after a title search is performed. The verification of acreage through research of ownership including out-conveyances and surveys, if necessary, may total a different amount than that shown on the district agreement. Although such adjustments are more often reductions, there are sometimes increases in acreage. The net loss in FY'87-is 49.04 acres which brings the total to date to 308.04 acres.

A total of 3,152.84 acres from all factors were officially excluded in FY'87. Those adjustments are made to the district acreage base on FY'87 District Participation Table on page 11. Adjustments to easement acreage are shown on the FY'87 Easement Participation Table on page 13 for lot exclusions and road improvements. Adjustments from deeds are reflected in the Historic Perspective Table on page 15. To date, 4,939.84 acres have been excluded, representing a loss of 3.5% for the current district acreage base.

FY'87 DISTRICT PARTICIPATION - Page 11

The Foundation approved the establishment of 153 agricultural preservation districts protecting 21,511 acres in FY'87. This constitutes the largest annual addition of districts in the program's ten year history, topping the record set in FY'86 by 1,529 acres. The new acreage provided a 17% increase to last year's total of 124,171.81 acres. After acreage adjustments, a new total of 978 districts protecting 142,530.36 acres are enrolled in the program. The average farm size of the new FY'87 districts is 140.6 acres, down from the FY'86 average of 143 acres. By comparison, the average farm size of all districts is 145.7 acres, down from last year's average of all districts of 147.6 acres.

In comparing individual counties, Carroll County still leads the State in district acreage although its percentage of total acreage in the State dropped from 20.4% last year to 18% in FY'87. Caroline County set a new record in FY'87 by establishing 44 districts and 7,153.7 acres, the largest annual addition of district acreage by a county. By experiencing an annual growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grown from 10.1% growth of over 50% for the last four years, Caroline County acreage has grow

On a regional perspective, all regions are growing but the most dramatic growth is again in the Upper Shore Region, gaining 11,726 acres in FY'87 and growing from almost 25% of the State's total acreage in FY'86 to nearly 30% in FY'87. As a result, the percentage of total State acreage declined in all the other regions as shown on the Regional Analysis on page 5.

In addition to the growth by region and individual county, the program benefits by the establishment and growth of preservation areas, defined as the total amount of contiguous land under district agreement. The greater the "critical mass" of preserved agricultural land, the greater the insulation against development pressure. Preservation areas of significant size can also be instrumental in the retention of agricultural suppliers and services in the vicinity as well as sustaining a sense of a traditional agricultural community. In this vicinity program, the growth of preservation areas also indicates the effectiveness of "word voluntary program, the growth of preservation areas also indicates the effectiveness of mouth" advertising in the agricultural community as some farmers in an area wait to see of mouth" advertising in the agricultural community as some farmers in an area wait to see how their neighbors fared in the program before they sign up to join. Gains made with this type of growth indicate that farmers perceive it to be a successful program for their purposes.

The largest preservation area in the State is in Carroll County where 19 contiguous districts cover 2,714 acres. Two preservation areas in Carroll and one in Talbot constitute the 3 areas of the State with over 2,000 acres each, unchanged from FY'86. There are 11 preservation areas that are between 1,000 and 2,000 acres each, 4 more than FY'86. There are 44 preservation areas that are between 500 and 1,000 acres, 7 more than FY'86.

REGIONAL ANALYSIS:

PERCENTAGE OF TOTAL DISTRICT ACREAGE

REGION		FY'84	FY'85	FY'86	FY'87
WESTERN:	Garrett Allegany Washington Frederick	18.1% 17,195 acres	18.3% 19,243 acres	16.4% 20,391 acres	15.4% 22,020 acres
CENTRAL:	Carroll Baltimore Harford Montgomery Howard	49.0% 46,460 acres	47.5% 49,973 acres	44.7% 55,486 acres	41.5% 59,152 acres
SOUTHERN:	Anne Arundel St. Mary's Calvert Charles Prince George	13.4% 12,703 acres	13.6% 14,343 acres	12.5% 15,545 acres	11.6% 16,511 acres
UPPER SHORE:	Queen Anne's Talbot Cecil Kent Caroline	17.7% 16,836 acres	18.8% 19,776 acres	24.3% 30,202 acres	29.5% 42,028 acres
LOWER SHORE:	Dorchester Wicomico Worcester Somerset	1.8% 1,700 acres	1.8% 1,946 acres	2.1% 2,548 acres	2.0% 2,819 acres
TOTAL AC	REAGE:	94,894 acres	105,281 acres	124,172 acres	142,530 acres

FY'87 CERTIFICATION REPORT - Page 12

The report shows the Certified Agricultural Land Preservation Fund with which FY'87 easement offers were made. The FY'86 certification amount of \$8.6 million, the highest annual amount in program history, left a balance of approximately \$2 million in late rejected offers and surplus. The offer process must end by the end of the fiscal year.

Approximately \$2.6 million in the Fund's share of agricultural transfer tax is shown as "FY'86 Net Revenue" because it was generated during FY'86 less administrative overhead and was available for use in FY'87. The "FY'86 Unexpended Three-Year-Old County Agricultural Transfer Tax" totalling over \$278,000 is allocated to special accounts to be applied towards easement acquisitions in the county of origin after a county's local share of agricultural transfer tax was unused for over three years and billed by the Comptroller by law.

Encumbrance cancellations show adjustments in easement purchase due to reductions in acreage after a title search prior to settlement. It could also include situations where landowners subsequently reject offers months after they had initially accepted them.

To the unencumbered fund balance of over \$4.8 million, \$3.0 million in Program Open Space funds were added yielding an FY'87 Certified Agricultural Land Preservation Fund balance of over \$7.8 million. County matching funds provided an additional commitment of \$2.6 million.

FY'87 EASEMENT PARTICIPATION - Page 13

Easement acreage under contract status in FY'87 was the highest annual acquisition in the program's history, exceeding the record set in FY'86 by 674 acres. Offers to purchase easements were accepted by 80 of 121 applicants to permanently protect 11,735 acres. The FY'87 easement acquisition provided a 24% increase to last year's total of 48,341 for a total to date of 393 easement properties permanently protecting 60,070 acres. This amount is significantly more than any other program of its kind in the United States.

Comparing individual county progress, Carroll County still leads the State and the nation with 13,911.1 acres which is 23.1% of the State total, down from 27% in FY'86. Caroline County added 3,031.7 acres in FY'87, a 52% county increase, for a new total of 8,840.4 acres. This represents 14.7% of the State total, up from 12% in FY'86. Significant activity occurred in Baltimore, Frederick, Garrett and Queen Anne's Counties. Easements were added for the first time in Cecil and Wicomico Counties.

With the same regions as in the district analysis, easement growth over the last 4 years is as follows:

REGIONAL ANALYSIS:

PERCENTAGE OF TOTAL EASEMENT ACREAGE

REGION	FY'84	FY'85	FY'86	FY'87
WESTERN	12.9%	14.5%	15.6%	15.9%
	3,729 acres	5,386 acres	7,543 acres	9,534 acres
CENTRAL	65.4%	60.3%	54.7%	48.2%
	18,939 acres	22,498 acres	26,472 acres	28,957 acres
SOUTHERN	11.8%	13.5%	12.2%	11.2%
	•		5,919 acres	
UPPER SHORE	9.9%	11.7%	16.8%	23.4%
	2,859 acres		8,140 acres	
LOWER SHORE	0.0%	0.0%	0.5%	1.3%
	0 acres		267 acres	
TOTAL ACREAGE	28,938 acres	37,292 acres	48,341 acres	60,070 acres

With an addition of 5,909 easement acres, the Upper Shore Region increased its holdings by 6.6% in the FY'87 Easement Acquisition Program for a total of 23.4%. The Central Region added 2,485 acres but declined from 54.7% of the State total easement acreage to 48.2% in FY'87. The Western and Lower Shore Regions increased their percentages slightly and the Southern Region decreased its percentage slightly.

FY'87 EASEMENT ACQUISITION PROGRAM - PAGE 14

This table analyzes average values per county and for the State that had a bearing on the FY'87 accepted offers that will allow 11,735 acres to be placed under easement. Average values are useful to a point but caution should be used in the context in which they might be applied. These values are strictly an average of asking prices and site specific appraised values of property within each county for FY'87 only pertaining exclusively to those properties on which easement offers were accepted. They should not be regarded as representative values of all farmland in a county.

The competitive bidding factor in the program allows the offer amount to equal the landowner's asking price or the appraised easement value, whichever is lower. The only other allowable value is an "insufficient funds offer", which is less than either the asking price or the appraised value but is the total of the remaining funds on hand. Such an offer may be turned down without penalty, but some are accepted because there is no guarantee of a subsequent full offer.

The average acquisition cost is always less than the average asking price and the average appraised easement value because each of its components is selected from the lower of the other two values. The FY'87 average acquisition cost of \$756 per acre nearly matches last year's average acquisition cost at \$752 per acre which is the lowest annual average in program history. The drop in acquisition cost may be due primarily to the substantial influence of generally lower property values from the Upper Shore and Western Regions, providing 64% of the accepted offers and offsetting the higher values of the Central Region and some of the Southern Region which had established the norm in past years.

After all the offers were made, 80 applicants accepted their offers at a total cost of \$8,874,982.75 of which \$7,138,186.32 or 80% was State funds and \$1,736,796.43 or 20% was county matching funds. The discount value i.e. the savings derived by an offer which was less than the appraised easement value, totalled \$893,600. Using the \$756 average acquisition cost per acre as a measure, an additional 1,182 acres were acquired in the FY'87 program due exclusively to the competitive bidding component of the program. This component, more than any other, allows the Maryland Program to be one of the most cost effective programs in the country.

Landowners who disagree with the values established by the State appraisal may file for arbitration with the local property tax assessment appeals board. A total of six cases have been filed as a result of FY'87 easement offers. Only one case has been finalized by being found in favor of the landowner and the Foundation voted not to appeal to the Maryland Tax Court. Three cases are still in process and two have not yet been heard. Over the history of the program, there have been 23 arbitration cases, representing 3% of the 729 easement applicants who could have requested arbitration. To date, 11 have been found in favor of the landowner, 7 found in favor of the State and 5 as yet undecided.

EASEMENT ACQUISITION PROGRAM - HISTORIC PERSPECTIVE - Page 15

The Historic Perspective Table shows easement acquisition by year with the final annual figures reflecting adjustments from deeds and late rejections after an initial acceptance of an easement offer. The total dollar figures and average per acre figures by year for asking price, fair market, agricultural and easement values are based on appraisal acreage and do not reflect adjustments for acreage as settled. The total acquisition cost and per acre averages reflect final dollar figures. Adjustments for total acreage reductions to date due to lot exclusions were made at the bottom of the acreage column. An adjustment to reflect the total payback amount for lot exclusions to date is shown at the bottom of the acquisition cost column.

Over the last eight funded years, 393 of a potential 729 easement applicants, or 54%, have accepted offers permanently protecting 60,070 acres. The overall average farm size is 154 acres with annual averages ranging from 147 to 173 acres. The average asking price is \$926 per acre with a range in the annual averages from a low of \$884 per acre to a high of \$1,483 per acre. The average appraised fair market value is \$2,293 per acre, ranging from \$2,111 to \$2,772 per acre. The average appraised agricultural value is \$1,381 per acre with a range of annual averages of \$1,268 to \$1,736 per acre. The average appraised easement value is \$912 per acre, ranging from \$832 to \$1,036 per acre.

The acquisition cost, that which is actually paid, is the asking price or the appraised easement value, whichever is the lower of the two. Landowners may discount their asking prices as a form of competitive bid to improve their ranking and better insure that they will receive an offer. The new average acquisition cost is \$804 per acre with annual averages ranging from \$752 - \$953 per acre. The annual average acquisition cost per acre has been declining over the last four years for two potential reasons. One is the growing activity in the Upper Shore Region with its relatively lower land values. The other reason is the program's ability to provide service to all qualified farms rather than targeting to areas under development pressure which would escalate land values.

The discount value for the program's history totals \$6,518,949 savings by offering a discounted asking price rather than the appraised easement value. Using the historic average acquisition cost of \$804 per acre as a measure, 8,060 more acres were acquired by virtue of the competitive bidding mechanism. This mechanism is the single most cost effective component in the program.

PRESERVATION VERSUS CONVERSION - Page 16

The graphs and table show a comparison between the amount of Maryland farmland that has been converted to other land uses per year from 1982 through 1987 and the corresponding amount of easement acreage acquired for each of those years.

In spite of being the most successful program in the country, Maryland's efforts have not been keeping pace with conversion such that lost farmland is at least matched by saved farmland. In fact the gap has gotten wider, particularly over the last two years. To date, preservation has supplanted only 48% of the farmland lost during the past six years, down from 53% last year.

To form a projection to the year 2000, the State has been losing an average of 18,343 acres per year and saving 8,726 acres per year based on performance of the past 6 years. At this pace, over the next 13 years, an estimated additional 238,459 acres could be lost and 113,438 more acres could be preserved leaving a net loss of 125,021 acres.

Although the Foundation is proud of the progress made in its brief history, clearly a more substantial and sustained effort is required to simply keep pace with the farmland that will be lost.
